

International Microwave Symposium 17-22 May 2015, Phoenix

IMS2015 in Phoenix, Arizona and we will participate again.

Come and see us at our booth 1321 from 19th – 21st of May 2015.
We look forward to seeing you!

Dear

From 17th - 22nd May the world-wide leading companies and personalities in the field of microwave technology are going to come together in Phoenix, Arizona. With more than 150 speeches, workshops and tutorials the convention will be the greatest event of its kind. The symposium will be accompanied by a three-day-exhibition in which over 550 enterprises will participate.

Varioprint AG is proud that we will be able, together with vario-optics ag, to present the globally unique, electro-optical PCB technology for the first time. Our competent team on site will be happy to welcome you at our booth Nr. 1321.

Particularly in the area of high-frequency printed circuit boards, for example in Advanced Driver Assist Systems, metal core PCBs with cavities, integrated wave guide applications, as well as flex and rigid-flex PCBs, we will present you an extensive portfolio of innovative application options.

IMS

Program

Registration

A selection of our products that we will show you at our booth 1321:

Mixed constructions

Best practice, fully automated processes

Varioprint's mixed constructions with PTFE and FR4 offer the perfect balance between cost and performance.

Our automated production processes and accurate process-control guarantee a steady and consistently good HF-performance throughout the whole life-cycle of the product.

Metal core PCBs

We will convince you with our competence and expertise in technology

Sophisticated metal-core PCBs on HF substrates for the optimal heat dissipation of your components.

Cavities and waveguide connects with mechanical cutting or laser processing. With dexterity and experience the familiar Varioprint quality is achieved!

Electro-optical PCBs

We are geared to the needs of the future

New requirements demand innovative solutions.

As a globally leading supplier of electro-optical PCBs, vario-optics offers in co-operation with Varioprint data rates and an integration densities in the PCB that have been unequalled to date.
